                                                                                                                                                                                                                                                                                                     activity.

DOMAIN: The three transmembrane domains are believed to be involved in pore formation by the cytotoxin.

FTM: Palmitoylated by hlyC. The toxin only becomes active when modified.

MISCELLANDOUS: The hemolysin of E.coli is produced predominantly by strains causing extraintestinal infections, such as those of
                                                                                                                                                                                                           DOMAIN: The Gly-rich region is probably involved in binding calcium, which is required for target cell-binding or cytolytic
                                                         FUNCTION: Bacterial hemolysins are exotoxins that attack blood cell membranes and cause cell rupture by mechanisms not clearly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PRINTS; PRO0313; CABDNGRPT.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 197
